

AIFP Branding & Style Guidelines

Document: AIFP-DOC-13 · Version: 1.0.0 · Governed by: AIFP-1 (Doc 01)

These guidelines govern the visual and editorial identity of **AiFinPay** and the **AiFinPay Paywall Protocol (AIFP)** across docs, code, packages, and the developer portal. The aesthetic is **enterprise-grade, infrastructure-first, technical but clean** — Stripe / Ramp / Anthropic vibe, not crypto manifesto.

1. Naming Convention (normative)

Use	Correct	Incorrect
Company	AiFinPay	AiFinPay, Aifinpay, AI FinPay
Protocol (full)	AiFinPay Paywall Protocol	AI Paywall Protocol
Protocol (abbr)	AIFP	aifp (in prose), AiFP
Spec	AIFP-1	AIFP1, AIFP 1.0 (use "AIFP-1 v1.0.0")
Proposal	AIP (AiFinPay Improvement Proposal)	EIP, AIFP-IP

Rules: "AIFP" is always uppercase in prose. The first mention in any document SHOULD expand to "AiFinPay Paywall Protocol (AIFP)". Never refer to AIFP as a token or coin — **AIFP is tokenless**.

2. Logo Usage

- **Primary mark:** the AiFinPay globe/network glyph + "AiFinPay" wordmark.
- **Clear space:** $\geq$ the height of the "A" in the wordmark on all sides.
- **Minimum size:** 24px height (digital), 12mm (print).
- **Variants:** full-color on light, full-color on dark, monochrome (black), reverse (white). Use the highest-contrast variant for the background.
- **Don'ts:** don't recolor, stretch, rotate, add effects/shadows, place on busy imagery, or recreate the wordmark in a different typeface.

3. Color Palette

Token	Hex	Use
Primary Blue	#2F5FD6	Brand accent, links, primary buttons, code highlights
Royal Blue (alt)	#2563EB	Diagrams, gradients, secondary accent
Ink (near-black)	#0B1020	Headlines, body on light
Slate	#475569	Secondary text
Mist	#F4F6FB	Surfaces / cards on light
Border	#E2E8F0	Hairlines, dividers, card borders
Surface Dark	#0E1424	Dark-mode background
Success	#16A34A	"Live / Done" states
Warning	#D97706	Caution, deprecations
Danger	#DC2626	Errors (AIFP-4xx/5xx)

Usage rule: one dominant accent (Primary Blue). Avoid rainbow palettes. Status colors only for status.

4. Typography

Role	Family	Notes
Headlines	Inter / Helvetica Neue	Tight tracking; uppercase for section labels
Body	Inter / system-ui	16px base, 1.6 line-height
Mono / code	JetBrains Mono / SF Mono	Code, IDs (<code>rcpt_*</code>), endpoints

Hierarchy: H1 bold ink; H2 with a left **Primary Blue** bar; uppercase blue labels for eyebrows; generous whitespace; no center-justified body text.

5. Iconography

- Line icons, 1.5–2px stroke, rounded joins, `currentColor` (Lucide / Heroicons style).
- No emoji in normative docs, decks, or diagrams** — use inline SVG icons instead (lesson from the Casper deck: emoji render as tofu in headless rendering).
- Icon sizing relative to text (`width: 1em`) so they inherit color and scale.

6. Code Style (across SDKs & samples)

- Indent:** 2 spaces (JS/TS/JSON/YAML), 4 spaces (Python), gofmt (Go), rustfmt (Rust).

- **Quotes:** double in JSON; language-idiomatic elsewhere.
- **IDs in examples:** always the canonical prefixes — `mrch_`, `agt_`, `wlt_`, `qt_`, `rcpt_`, `pp_` — and the same sample values across docs (`mrch_9f3a1c2b`, `wlt_3a1b`, `qt_8d21f0`, `rcpt_7b3e9f21`, `agt_4f9a2c7e`).
- **Amounts:** decimal **strings** in USD (`"0.00001"`), never floats.
- **Lint:** every code sample must pass CI checks against OpenAPI (Doc 08) + JSON Schemas (Doc 10).

7. Documentation Style

- **Voice:** precise, calm, infrastructure-grade. Active voice. Short sentences.
- **Normative language:** RFC 2119 keywords (MUST / SHOULD / MAY) only in normative docs (01, 04, 06).
- **Terminology:** use the canonical glossary (AIFP-1 Appendix A); never invent synonyms (it's a "receipt", not a "token receipt" or "payment proof token").
- **Numbers/invariants:** pricing, fees, TTLs, and network counts must match the canonical values everywhere (see Synchronization, Doc README).
- **No marketing fluff in reference docs.** Sell in the Whitepaper (05); explain in the rest.

8. Repository Naming

- Org: `github.com/aifinpay` .
- Pattern: `aifp-<area>` for protocol artifacts, `<lang>` clarity for SDKs.
- Examples: `aifp` (RFC/spec), `aifp-go`, `aifinpay-python`, `merchant-js`, `agent-js`, `docs`, `examples`, `openapi`, `schemas`, `conformance` . Full map in Doc 15.

9. Package Naming

Ecosystem	Pattern	Example
npm	<code>@aifinpay/<pkg></code>	<code>@aifinpay/agent</code> , <code>@aifinpay/merchant</code>
PyPI	<code>aifinpay-<pkg></code>	<code>aifinpay-agent</code>
Go	<code>github.com/aifinpay/aifp-go</code>	module path
crates.io	<code>aifinpay</code>	crate
Maven	<code>io.aifinpay:aifp</code>	group:artifact
Packagist	<code>aifinpay/aifp</code>	vendor/package

Ecosystem	Pattern	Example
NuGet	AiFinPay	package id

10. Versioning Rules

- **SemVer** MAJOR.MINOR.PATCH for the protocol, SDKs, and schemas (see Doc 06 §5).
- Docs are versioned with the protocol MAJOR.MINOR; the portal exposes a version selector.
- Receipt `kid` is date-stamped (`aifp-2026-06`) and rotated; old `kid` s remain resolvable for receipt TTL windows.
- Breaking changes require an AIP, a deprecation window, and ≥ 12 months of previous-MAJOR support.
